Cable : "Goodbrass"

To the Trade

Catalogue "F", in addition to illustrating our many important new items, is also designed as a handy reference, and supersedes all previous catalogues. Please destroy all old ones to avoid confusion.

After eighteen years' experience we have developed a quality combined with an accuracy in manufacture in each article, unequalled, and which will overcome that time loss caused by less perfect goods and which has turned many a profitable contract into a loss.

We are, of course, responsible for our goods, although "Good" goods need no guarantee.

Our Mail Order Department is dependable and specially arranged to give quick deliveries and the very best attention in every way.

Every article in our catalogue is carried in stock subject to immediate call and all orders are shipped same day as received.

Entered according to act of Congress in the year 1914, by Good Manufacturing Company, Inc. in the office of the Librarian of Congress, at Washington
--

The Origin of "Good"

In the year 1896 a Mr. James N. Crabb, of Indianapolis, Ind., originated the idea of the small article here illustrated—the "Good" Stopper.

This name, given it by the inventor, was not based on the name of anyone ever connected with it, but because the first remark made by practically everyone to whom he showed it was, "that's good". Hence—"Good" Stopper.

From this originated the Good Manufacturing Company, organized in May, 1896, for the manufacture of this "Good" Stopper, and who, after outgrowing three locations, finally established themselves in their own building at 303 to 305 East 134th Street.

In marketing the "Good" Stopper, the great need for an absolutely dependable line of other small goods was brought to their attention so strongly from time to time that they conceived the idea of manufacturing a complete line of these, assured in advance by the trade that they would have liberal patronage for goods of the quality they proposed to make.

The soundness of this policy and their manner of carrying it out is amply demonstrated by the support the trade has given them, through which they have grown from the manufacturers of the small "Good" Stopper to the position at the head of this industry, with a name which is the synonym of quality and reliability and with trade extending to all parts of the civilized globe.

The company wishes to express its thanks to its many customers for their expression of appreciation of its aims by their support which has made this growth possible, and which the company has fully endeavored to merit.

"GOOD" GOODS NEED NO GUARANTEE

How Rubber Goods are Made

In giving the principal points in the art of rubber goods manufacture, we explain why "Good" rubber goods do not harden with age, thus allowing the trade to safely carry a proper stock; also why it is an impossibility for others to duplicate our "Good" compounds, although it has been tried by practically every manufacturer of plumbers' rubber goods in this country, and some in other countries.

First comes the company's willingness to pay the price for the proper material—then the knowledge of what kind of crude rubber and other ingredients best meet the requirements of the particular use for which they are intended. The majority of "Good" goods have the pure wild "up-river" Para—Indian cured—as a base. It is the finest, possessing qualities none other have.

Second—of equal importance—the mixing of the compounds and curing of same, requiring the greatest skill and knowledge. There are various processes of curing, with a number of methods in each. Some compounds requires even several cures.

Therefore, while the compounds can be analyzed and the ingredients and proportions obtained, yet the cure will be entirely unknown. Without this knowledge two compounds may have the same ingredients—the same appearance—apparently the same resiliency—yet under different cures, one will retain its elasticity for years and the other lose it in a short time.

Thus it is that no rubber manufacturer will agree to absolutely duplicate a quality, and why the "Good" quality cannot be furnished by others.

GOOD MANUFACTURING COMPANY, INC.

"Good" Tank Bulbs

New "Good" Shape and Construction (Patent Pending)

In this new "Good" shape and construction of Tank Bulb we have protected every point where it is possible for any trouble to arise, which, with three thorough inspections makes it practically impossible for anything but *perfect* goods to go out, thus insuring the trade against any time loss, for which we hold ourselves responsible.

The special advantages are as follows:

First—The quality of rubber, the best we have yet had, without which the construction would be of no value. This quality has such "life" and resiliency, that it will seat tight even if valve seat is imperfect.

Second—The top is made of the same fine quality of rubber as the bottom, thus insuring against any cracking or other troubles.

Third—The new "Good" shape offers least resistance in using, which in conjunction with the stiff inner reinforcement of top, makes it impossible for the bulb to elongate, swell or lose its shape in any way.

Fourth—The inner reinforcement at seam positively prevents it from opening.

Fifth—The square "open-work" spud is an absolute safeguard against pulling out.

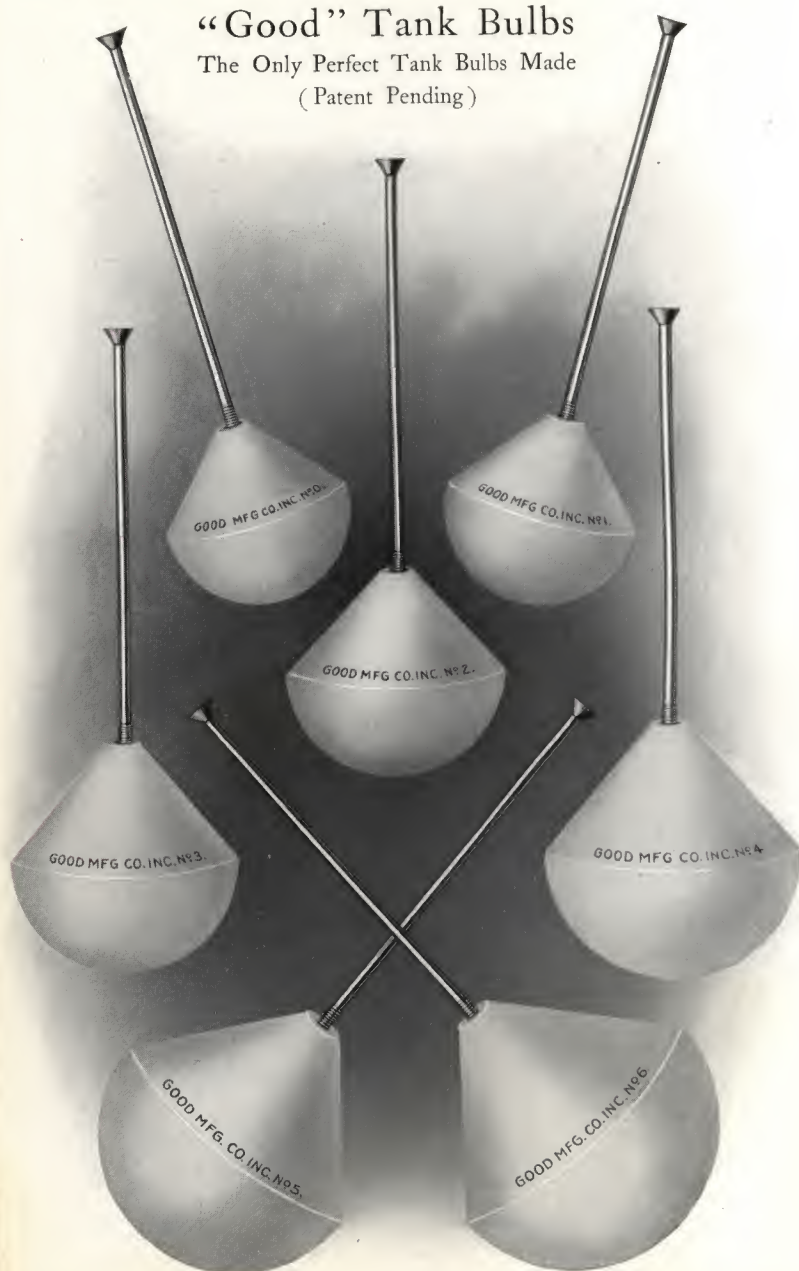

The "Good" quality cannot be duplicated for reasons stated on opposite page.

Impede	4	2 $\frac{3}{4}$ inches outside diameter	13.15
Civil	5	2 $\frac{7}{8}$ inches outside diameter	13.95
Ictic	6	3 inches outside diameter	16.00

There is never any time loss in using "Good" Tank Bulbs, which make them by far the *cheapest* to use, and for this we hold ourselves responsible.

It is of utmost importance that the proper size bulb is used, we therefore manufacture seven sizes, one to fit every size valve made and each size in use, making complete assortments of great advantage, as frequently the trade have the expense of repeated trip caused solely by incorrect size bulb having been installed.

The Care of Bulbs

Each "Good" Bulb is packed in a cone. It is absolutely necessary that they remain packed in this manner until used, in order that the sensitive flexible bottom retain its perfect shape.

The "Extra" Width Edge—Will not wrinkle

We have developed a new and most beautiful quality for our well-known Feather Edge Syphon Valve Washers, using our fine old quality as a base.

This new quality combines a "body and life" with its resiliency which prevents any possible wrinkling of the edge.

This combined with the extra width of the flange insures a tight connection in all cases—even if seat is worn or corroded—and where all others fail. This compound cannot be duplicated. See page 6.

This "Good" Fuller Ball Compound in eighteen years of use by the trade, has even the only one which would meet all conditions and which gives satisfaction where all others fail.

They absolutely insure satisfaction at first installation not requiring extra trips.

These Fuller Balls cannot be duplicated as the most important factor is the mixing of the ingredients—the working up of the compound to the cure—and the special cure, none of which can be obtained by analyzing. See page 6.

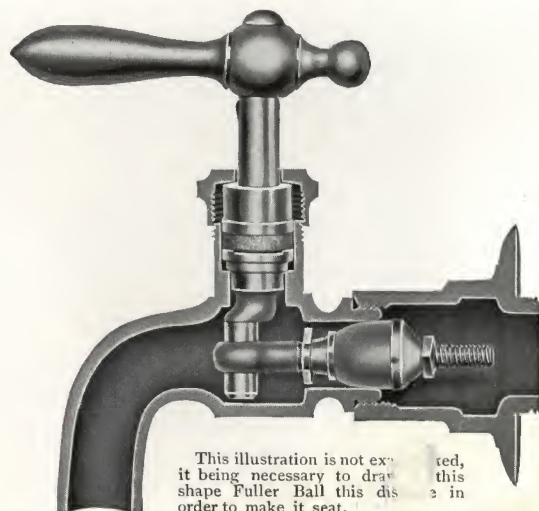

"GOOD" GOODS NEED NO GUARANTEE

“Good” Fuller Ball—Faucet Closed

Faucet closed, showing how the entire strength is utilized in the “Good” Fuller Balls, making perfect cushion seat on the end—non-hammering.

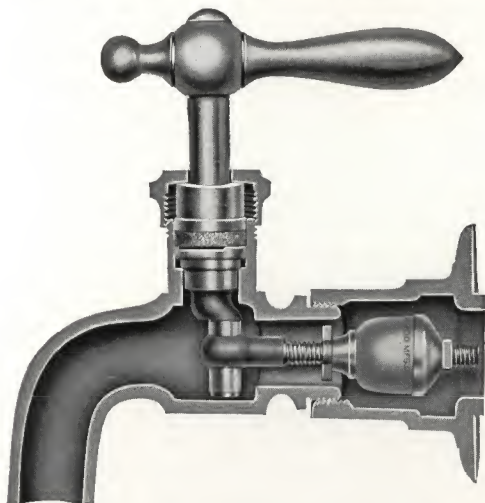

Other Fuller Ball—Faucet Closed

This illustration is not exact, it being necessary to draw this shape Fuller Ball this distorted in order to make it seat.

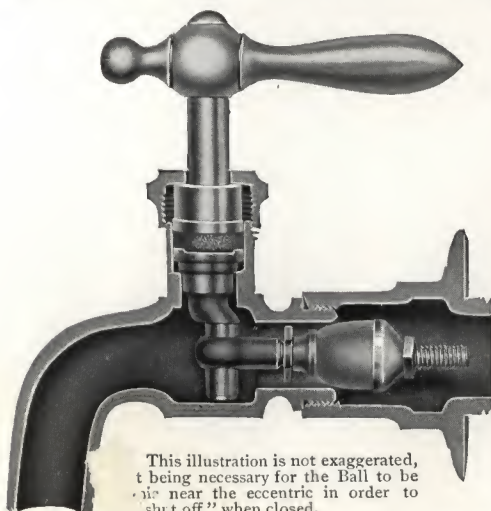

Faucet closed, showing how almost the entire strength of all Fuller Balls, excepting the “Good”, is lost, seating on the hard seat and pressing Ball out of shape.

"Good" Fuller Ball—Faucet Open

Faucet open showing how the waterway in using the "Good" Fuller Balls is opened to the fullest.

Other Fuller Ball—Faucet Open

This illustration is not exaggerated, it being necessary for the Ball to be near the eccentric in order to "shut off" when closed.

Faucet open, showing extremely small waterway in using all Fuller Balls, excepting the "Good".

Our full company name is molded on each genuine "Good" Fuller Ball.

"GOOD" GOODS NEED NO GUARANTEE

"Good" New Style Fuller Balls

For Peck Fixtures
For any Temperature from Freezing Point to Steam

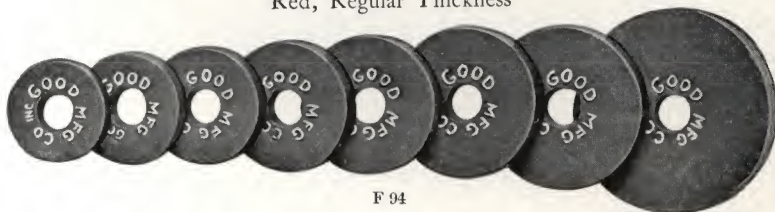

F 93

Code	Size	Per 100	Code	Size	Per 100
Inweb	$\frac{3}{8}$ inch	\$8.60	Inwrap	$\frac{5}{8}$ inch	\$13.00
Inworn	$\frac{1}{2}$ inch	10.15	Iodal	$\frac{3}{4}$ inch	17.60

These are better than any other for these fixtures, being made of our regular "Good" Fuller Ball Compound and by the same *secret* process.

Non-acid Fiber Bibb Washers

Red, Regular Thickness

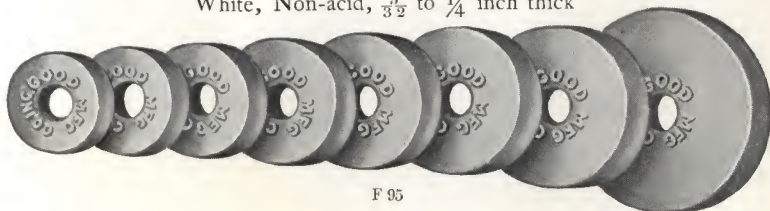

F 94

Code	Per 100	Code	Per 100
Iodate $\frac{1}{4}$, $\frac{3}{8}$, $\frac{3}{8}1$, $\frac{1}{2}$, $\frac{1}{2}1$, $\frac{5}{8}$ and $\frac{3}{4}$ inch	\$1.00	Iodic 1 inch	\$1.50

The acid being extracted from these Fiber Washers, makes them better than all others, as the acid in the fiber disintegrates the washer and causes corrosion of the metal bibb seat. We do not break boxes of 100.

White, Non-acid, $\frac{5}{32}$ to $\frac{1}{4}$ inch thick

F 95

Code	Per 100	Code	Per 100
Iodide $\frac{1}{4}$, $\frac{3}{8}$, $\frac{3}{8}1$, $\frac{1}{2}$, $\frac{1}{2}1$, $\frac{5}{8}$ and $\frac{3}{4}$ inch	\$1.50	Iodine 1 inch	\$2.50

The acid being extracted makes them better than all others, as explained above. We do not break boxes of 100.

GOOD MANUFACTURING COMPANY, INC.

“Good” Double Seat Compression Cushions

(Patent Pending)—For any Temperature from Freezing Point to Steam

Cross-sectional View

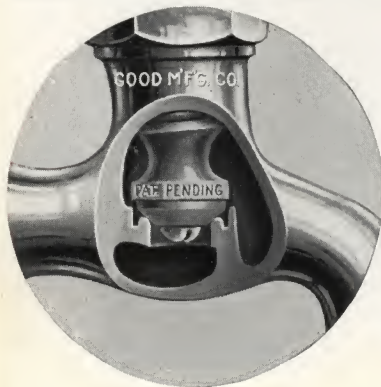

The combination makes the “Good” the perfect cushion

F 96

Made of the same compound as “Good” Fuller Balls

Code	Size	Per 100	Code	Size	Per 100	Code	Size	Per 100
Iodism	$\frac{1}{4}$ inch	\$4.25	Iodol	$\frac{1}{2}$ inch	\$4.25	Ionian	$\frac{3}{4}$ inch	\$4.25
Iodite	$\frac{3}{8}$ inch	4.25	Iolite	$\frac{1}{2}$ L inch	4.25	Ionic	1 inch	6.85
Iodize	$\frac{3}{8}$ L inch	4.25	Ion	$\frac{3}{8}$ inch	4.25			

These are made of the famous “Good” Fuller Ball Compound and by the same *secret* process. They have been thoroughly proven out by the trade in eighteen years of use. They cannot be duplicated. See page 6.

The Combination

of the “Good” Compound with the shape, is what makes the “Good” Cushions better than any other compression packing—one without the other is a failure.

Without this special compound the shape may seat tight, but will not give the service.

This “Good” Invention

is absolutely dependable even if the bibb seat is imperfect, and insures your profit always if the simple instructions are followed.

Instructions

First—Have your bibb screw long.

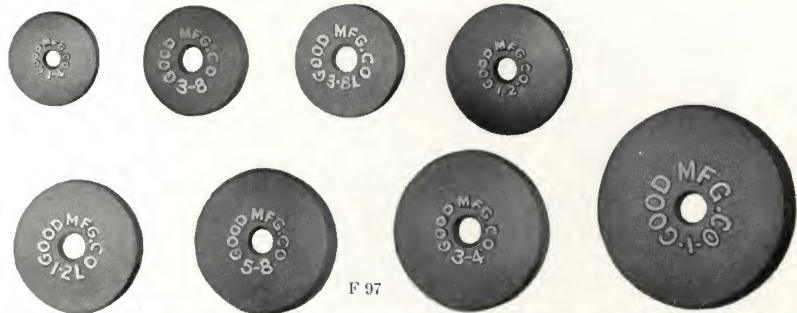

Second—Instruct your customer to screw down as tight as for a flat washer.

Every genuine “Good” Cushion has the full company name molded on same.

“GOOD” GOODS N E E D N O G U A R A N T E E

GOOD MANUFACTURING COMPANY, INC.

Plumbers' Friends and Force Cups Extra Quality

Free Display Board

We have made this stand to meet the requirements of our customers who find it far more profitable to sell Plumbers' Friends to their patrons than to loan them their own or let them buy at department or other stores thus fostering competition. We furnish this free with order for stock to fill it, namely, Sixteen Friends.

Plumbers' Friends—Extra Quality

Nos. 0 and 1

	No. 0	No. 1
Diameter of cup	4½ inches	4 inches
Length of cup	4¾ inches	5 inches
Length of cup and handle	31 inches	39 inches

Code		Each
Ipo	No. 0, complete	\$3.00
Iranic	No. 0, with clamp, less handle	2.88
Cleave	No. 1, complete	2.50
Encage	No. 1, with clamp, less handle	2.38

The above styles are of a good heavy construction made of a quality specially developed to stand up under the hard usage given them by the trade. They are the best Plumbers' Friends made.

F 107

No. 3

Diameter of cup	4 inches
Length of cup	4¾ inches
Length of cup and handle	31 inches

Code		Each
Epic	No. 3, complete	\$1.25
Era	No. 3, with clamp, less handle	1.13

F 108

This style is specially designed for sale by the trade, in place of loaning their own or forcing their customers to go elsewhere for them. The construction is somewhat lighter than Nos. 0 and 1, and of second quality. Yet it is very satisfactory and much better than the cheap Plumbers' Friends usually sold.

It is specially designed to be satisfactory so as not to react and interfere with other business which is liable to be the case when the quality is too poor.

Union Washers of All Kinds

Steam, Water and Gas—A Size to Fit every Union

Red Rubber—Black Rubber—Fiber—Paper

Sizes

We have used every possible means to obtain the sizes for every union and believe we have a size for every one.

For Steam

Our Union Washers for steam are made of red rubber, based on our fine red rubber sheet packing quality for steam and is an extra fine quality.

For Water and Gas

Made of black rubber and will stand any degree of heat and cold.

Fiber—Non-acid

These are of an extra quality having all of the acid extracted which is used in making fiber. They are therefore much longer lived and more reliable, as this acid eats the fiber in time and also corrodes metal.

“Good” Blue Steam Packing

Superior to all—Flexible

F 127

In three thicknesses, $\frac{1}{16}$, $\frac{3}{32}$ and $\frac{1}{8}$ inch

Code Per Pound
Jamber In any of the above thicknesses \$2.75

In packings, the importance of quality in steam packings cannot very well be over-estimated. We therefore have developed the “Good” Blue Steam Packing which has proven out very greatly superior to any steam packing yet made.

The United States Government makes a special superheat packing for the extreme heat conditions in their battleships having a large percentage of pure para rubber as a base.

We have used this same pure para rubber as a base for our “Good” Blue Steam Packing which has given us the superior results we have obtained.

It is flexible, thus adapting itself to uneven surfaces.

"GOOD" GOODS NEED NO GUARANTEE

"Good" Tested Fittings

Each Fitting Tested under Pressure—Each Fitting Perfect

The "Good" Tested Fittings

avoid all possible time loss for which the Good Manufacturing Company hold themselves responsible.

The basis for manufacturing such fittings is that the money loss in time—holding up of contracts and otherwise from imperfect fittings is so out of proportion to the small cost of the fitting. Therefore fittings which could be depended upon under all conditions, would be by far the most profitable to use for all classes of work from the finest to the cheapest.

How the "Good" Tested Fittings are Manufactured

Test—Each and every fitting is individually tested under high pressure.

Weight—Heavy solid brass.

Beads—Very heavy to prevent splitting.

Threads—Perfect full threads.

Recessed—Every fitting is recessed to conceal connecting threads.

Finish—An extra hard nickel with very high polish.

Responsibility—We will be responsible for any time loss where the fitting should be at fault.

Summary—Fittings such as have never yet been made by anyone—prices right.

Each "Good" Tested Fitting has the J. M. company name and "Tested" stamped thereon

"Good" Split Floor and Ceiling Plates

Improved Catch—New Pattern Spring Clasp for Ceiling Plates

The "Good" Split Plates

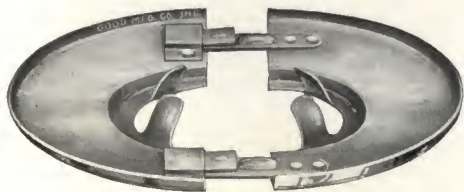

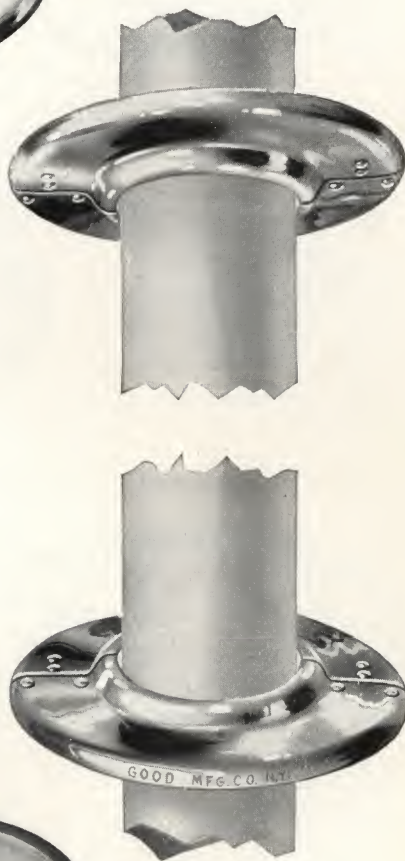

These *Floor Plates* have a new heavy catch which, while *easily opened*, has a good positive hold and adds firmness at the split.

There are no indentations or openings to catch dirt.

Made of Steel

with a very heavy plating of hard nickel on an exceedingly heavy plating of copper, which thoroughly protects it and makes it as serviceable as brass with the finish even more beautiful. It is the most satisfactory Split Plate on the market.

Ceiling Plates cannot slip or work down, being held absolutely firm by the coil spring.

"Good" No. 77 Basin Clamp

With Expansion Bolt—Brass—Ball Bearing

Code
Beetle Complete with expansion bolt, as illustrated \$13.68 Per 100

The expansion bolt will hold in any straight hole from $\frac{1}{2}$ to $\frac{5}{8}$ inches diameter. Stronger and cheaper to use on new work than any other clamp, and on repair work it is invaluable, as the slab need

never be taken down, for the clamp can be quickly fastened in while it is in position.

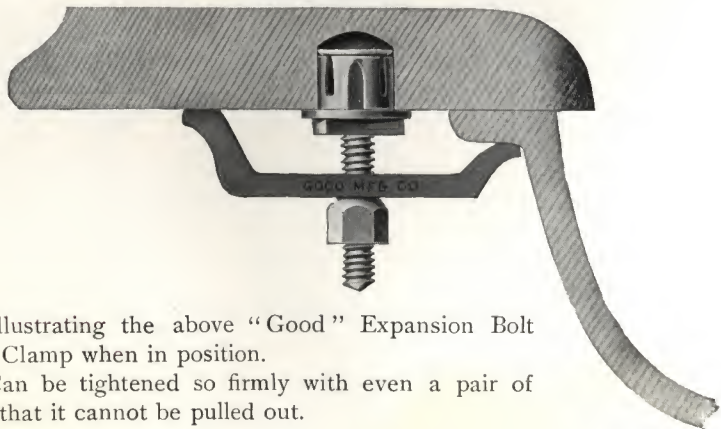

There is no danger of cracking the marble in using this basin clamp as there is when caulking in the lead.

It *never* drops out as a leaded-in clamp sometimes will. A fine drill will be given free with every order of 100 and up. This drill is specially made for drilling marble and only requires *one minute* to drill a hole for the above bolt.

The drill is illustrated in this catalogue, Fig. F 457.

The above "Good" Basin Clamp is a long, heavy and strong one, ball bearing, having $1\frac{1}{8}$ inches for adjustment, and made of a very tough brass which will bend before breaking.

This same clamp for leading-in is illustrated Fig. F 294.

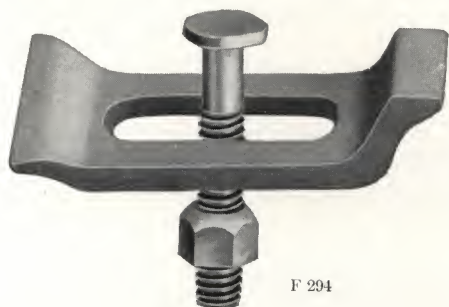

Illustrating the above "Good" Expansion Bolt Basin Clamp when in position.

Can be tightened so firmly with even a pair of pliers that it cannot be pulled out.

"GOOD" GOODS NEED NO GUARANTEE

"Good" No. 75 Basin Clamp

Ball Bearing
Brass

F 294

Code		Per Gross
Beg	Plain brass	\$12.00

A very heavy, strong clamp, having $1\frac{1}{8}$ inches for adjustment and ball bearing, thus the nut can be tightened at whatever angle the clamp may be, and is made of a very tough brass which will bend before breaking.

This is the same Basin Clamp as illustrated, Fig. F 293, except that it does not have the expansion bolt.

Steel Toggle Bolt Swivels

To be used with regular Wood Screws,
any length, iron, brass or nickel-plated

Code	Per 100
Hitch Price Swivel only	\$10.00

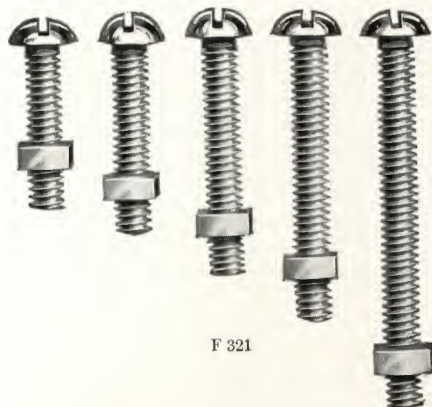

Made in two sizes, No. 1 and No. 2—No. 1 takes No. 10 or No. 12 Screw, No. 2 takes No. 12 or No. 14 Screw. Hold the swivel in the well by means of attached string while adjusting screw.

There are double springs riveted into the swivel which forms the thread at hole into which the screw turns. The tighter the screw is drawn, the tighter it clamps. This makes the cheapest and most convenient toggle-bolt, as any screw can be used; it is absolutely safe.

Refrigerator Strainers

Code
Blain
Convex, cast-brass . . . \$9.00
Per 100

The great saving of time in installing these new style patented Drip Pans, combined with their perfect drainage—smooth surface and easy cleansing feature, make them in every way more desirable than any other, including the lead-formed ones by the old method.

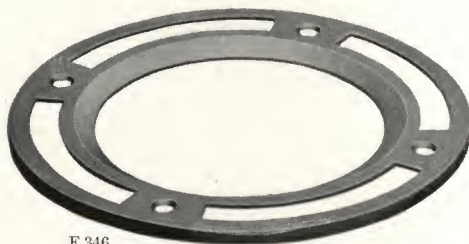

Nos. 1 and 2 have a patented double-threaded coupling in center—there being an inner female thread and an outer male thread the next size larger. Thus one pan can have either of two sizes pipe coupled directly to it without requiring any special connections or reducers.

No. 1 has double strainers—the large sheet strainer can be readily removed and cleansed, making it in every way the most satisfactory Drip Pan ever made.

Nos. 3 and 4 for lead pipe are especially satisfactory to install. The bottom around the hole under the strainer is depressed for flanging the lead pipe.

NOTE—The heavy white galvanizing by the old hot galvanizing method which is such a thorough protection is used on all of the above, the thin dark colored electro-galvanizing which is practically no protection not being used on any.

Cast-brass Closet Floor Flanges

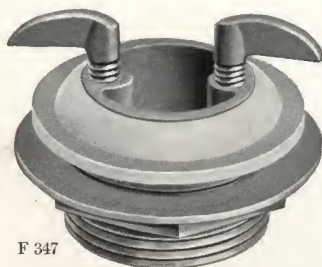

F 346

Code		Per Dozen
Aurum	Flange only, no bolts or washers	\$4.00
Hark	Flange, with two bolts and two washers each	5.40

"GOOD" GOODS NEED NO GUARANTEE

"Good" Noiseless Ball Cock

Noiseless on any Pressure — Rapid Filling (Patented)

The "Good" Noiseless Ball Cock is the only one made which is *actually noiseless*, both in *opening* and *closing* on any pressure—high, medium or low.

Noiseless—no whistling—no singing—no hammering.

Waterflow—has large waterway.

Rapid Filling—requiring less than a half minute.

Closing—Closes very easily, as it closes both with and against the pressure. This is caused by the back pressure from the water chamber at the top of the piston chamber. This also renders it noiseless.

Construction—very simple—no parts to work loose or get out of order. Can be readily taken apart without uncoupling from tank. By removing the two screws where Ball Cock is joined in center, the entire Ball Cock can be lifted out. The seat can also be taken out, being removable.

Troubles—All Ball Cock troubles are overcome by using the perfect "Good" Noiseless Ball Cock.

Patent—Our patent covers entire construction and we shall fully protect ourselves against all infringers.

Index

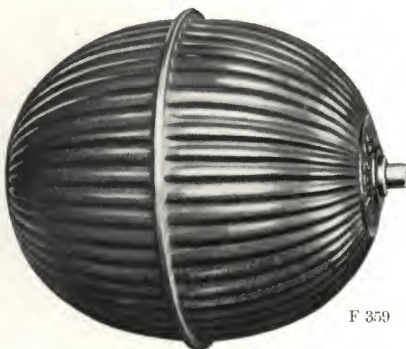

“Good” Solderless All Copper, Double Lock Seam Floats—Extra Heavy Weight

No. 1—Round

No. 3—Oblong

F 358

F 359

Position of spud prevents seam from striking bottom lining

The spud is in center, thus can be turned to better advantage in narrow tank. The shape prevents seam striking bottom

Double Lock Seam

The “Good” Solderless Float’s construction is such that they *cannot leak*, hence the advantage of maximum buoyancy being entirely open inside.

Weight—The weight of the “Good” Float is in the copper, the open disc being but small and light.

Strength—With the same weight copper, the corrugated float has 30 per cent more strength and value. The plain float is cheaper to manufacture and has proportionate value.

Made of 12-ounce Copper

Code		Per Dozen
Flay	No. 1—Size, 5 inch, round, solderless .	\$9.00
Hinny	No. 3—Size, 4½ x 5, oblong, solderless	9.00
Himer	No. 4—Size, 4 x 5, oblong, solderless	9.00
Kindred	No. 7—Size, 4½ x 6	10.50

Special prices in quantity

The extra weight of these new floats is in the thickness of the copper and not from any disc or other substance. They are specially made to meet the requirements where the minerals in the water are unusually severe on the copper. They are made of 20 per cent heavier copper than other heavy floats.

Seam Reinforcement

F 360

Code		Each
Illect	No. 2, 5 inch . . .	\$0.60
Keeper	No. 5, 4½ x 5 inch60
Kinetic	No. 6, 4 x 5 inch60
Kindly	No. 8, 4½ x 6 inch75

These prices are in dozen lots. Special prices in larger quantities.

Particular attention is called to the fact that these floats also have the double lock seam.

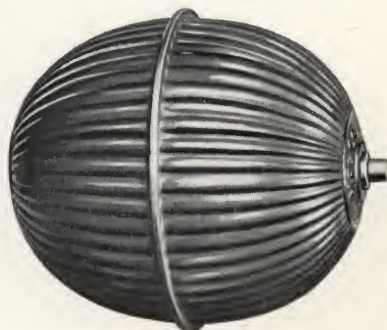

The oblong floats have spud in center thus can be turned to better advantage in narrow tanks. The shape prevents seam striking bottom.

Are made of 25 per cent heavier copper than the ordinary competition float. The construction does not allow leaks, hence is all open inside, giving full buoyancy.

The weight is in the *copper* and not in the disc, as the seam disc is small and light.

The corrugations add 30 per cent to their strength and value in same weight copper over the plain floats.

No. 4—Oblong

Glass Floats

Code	Per Dozen
Biddy 5 inches with stem holder, as illustrated . .	\$9.50
Holder only . .	.88

No parts to break off or work loose. Are guaranteed to be light enough in weight for any tank, and in sections where water contains substance injurious to copper, they are absolutely invaluable.

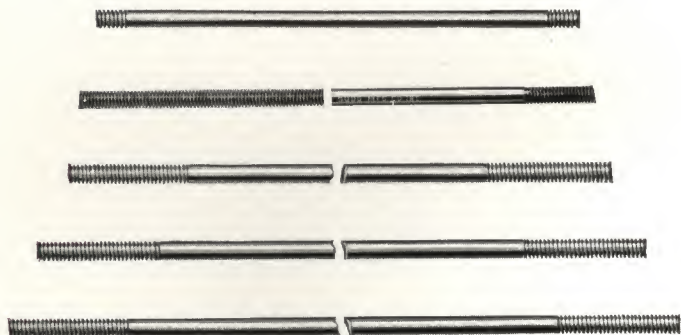

Wolff Float Rod Connection

Code	Per Dozen
Flick	\$1.50

By use of this, any standard float can be used on the Wolff tanks, as one end has the standard float thread and the other end is tapped to fit the Wolff rod. Thus all annoyance and expense of obtaining special floats is overcome.

Float Rods

Code		Per Dozen
Bide	1/4 x 8 inches, 20-thread, threaded 5/8 inch on each end	\$1.50
King	1/4 x 10 inches, 20-thread, threaded 5 inches on one end, 1 inch on the other	2.25
Flex	1/4 x 11 inches, 20-thread, threaded 1 1/2 inches on each end	2.38
Hast	1/4 x 15 inches, 20-thread, threaded 2 inches on each end	2.75
Haste	1/4 x 18 inches, 20-thread, threaded 2 inches on each end	3.25

The 10 inch float rod is threaded 5 inches on one end. All other long rods are threaded 2 inches on each end, thus they can be cut off to any desired length.

"GOOD" GOODS NEED NO GUARANTEE

GOOD MANUFACTURING COMPANY, INC.

“Good” Knife-blade Pipe Cutter Wheels

New — Thin

Self Sharpening—The most remarkable Wheel ever made

The “Good” Knife-blade Cutter Wheels will cut pipe in one-half the time of the best wheels made in the regular thickness, and with less labor, as they are thin—a regular “Knife-blade”. They will stand up to the most severe work under proper usage. The steel they are made of is the only steel which will stand the service required in this thin blade—the process is known only to the inventor, and the Good Manufacturing Co., Inc., have contracted for the exclusive right to the use of the steel for this purpose.

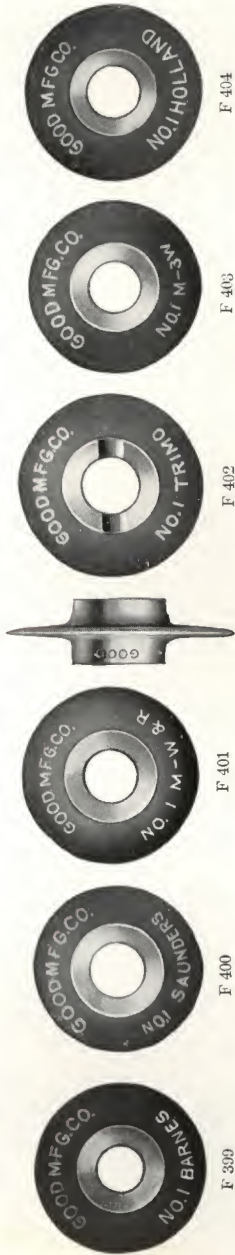

The cutting by the wheel in use sharpens it, hence always a good cutting edge.

The wheels should not be subjected to the common abuse of using worn out, bent or wrong-sized pins so that they will not track, or of prying off partly cut pipe. This last is specially unnecessary, as they cut in record time.

“GOOD” GOODS NEED NO GUARANTEE

“Good” Knife-blade Cutter Wheels

New Style

Cutter	Code	Per Dozen						Nos. 5, 6, 6½, 7
		No. 0	No. 1	No. 2	No. 3	No. 4		
Barnes	Knit	\$5.95	\$5.95	\$7.10	\$9.45	\$11.85	\$17.75

Vanderman	Knuckle		11.85	11.85	17.75			
Headson	Kraut		7.10	11.85	17.75			

Cut in half the time of any regular wheel and with less labor. The time saved in one-half hour's using will pay the cost of the wheel.
These Knife-blade Wheels will stand up under any kind of proper usage, but should not be abused.
Of the greatest value in contract work as time savers.

Stanwood	Laccase		1.20	1.20	1.80		
Wells	Laccate		1.50	1.50	2.25		
Grant	Laccic		1.87				

All of our pins for all makes are absolutely correct in size. In ordering always specify whether cutter is three-wheel, wheel and roller, or one wheel no roller.

Rollers

By inserting rollers in place of the two lower wheels in a Barnes cutter, the possibility of not tracking evenly is entirely eliminated. Barnes rollers have the same thickness as the corresponding wheels.

Adjustable Fine Thread Die Stock

Made of an extra fine quality Tool Steel

F 451

Code	Stock complete, adjustable, to cut, 1, 1 1/4, 1 3/8, 1 1/2 and 2 inch tubing, with 27 thread, each	\$20.00
Lamely	Cutters, per set of six cutters	8.00
Lament	Cutters, each	1.40

Please order Cutters by number, as each Cutter is different and is numbered.
This new patented Adjustable Fine Thread Die Stock is the greatest convenience and time saver.
A simple turn makes the adjustment, yet locks securely, thus giving necessary firmness for cutting—no loose parts to change, become lost, or mislaid.
Handles may be unscrewed from the stock, thus allowing the tool to be carried in the kit. All parts less than 8 inches long.

“GOOD” GOODS NEED NO GUARANTEE

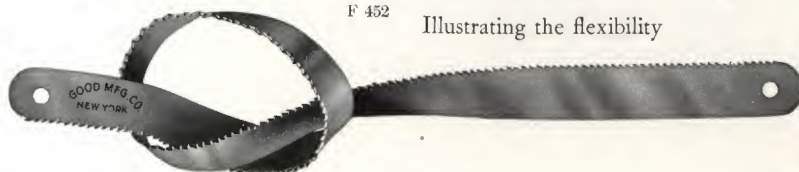

“Good” Flexible Hack Saw Blades

These are the best Blades made — Have flexible back and hard teeth — Will not break — Each blade individually tested

F 452

Illustrating the flexibility

Code		Per Dozen
Bung	8 inch	\$1.30
Bunk	9 inch	1.50
Bunt	10 inch	1.70

Code		Per Dozen
Buoy	12 inch	\$2.10
Lamina	14 inch	2.20

The teeth on each blade undergo a hand test for temper, thus insuring perfect cutting hardness.

For general use, including tubing and thin sheet, *use only* our FF blade.

For ordinary coarse work use our F blade.

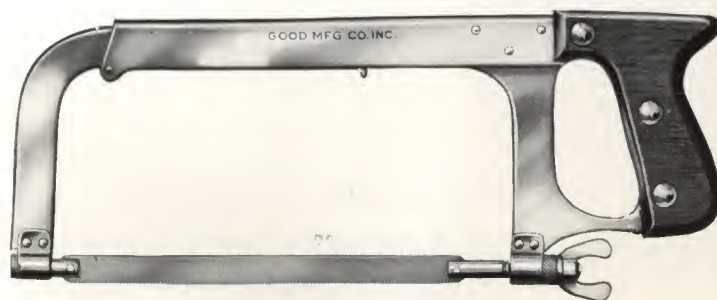

We also furnish a special coarse tooth flexible back blade for heavy work.

Extension Hack Saw Frames (Patented June 13, 1893)

Take in blades from 8 to 12 inches, inclusive

F 453

Code		F 454	Each
Bundle	Regular style, 3 inches deep, price with one blade		\$2.00

“Good” Tubing Expanders

For Joining and Lengthening Nickel-plated Tubing

F 471

Expands $1\frac{1}{4}$, $1\frac{3}{8}$,
 $1\frac{1}{2}$ and 2 inch tubing

F 472

Expands $1\frac{1}{4}$, $1\frac{3}{8}$
and $1\frac{1}{2}$ inch
tubing

F 473

Expands 2 inch
tubing only

Code		Per Set
Lander	Complete set, for expanding $1\frac{1}{4}$, $1\frac{3}{8}$, $1\frac{1}{2}$ and 2 inch tubing . . .	\$6.00
Landing	For expanding $1\frac{1}{4}$, $1\frac{3}{8}$ and $1\frac{1}{2}$ inch tubing, each	4.00
Lane	For expanding 2 inch tubing only, each	3.00

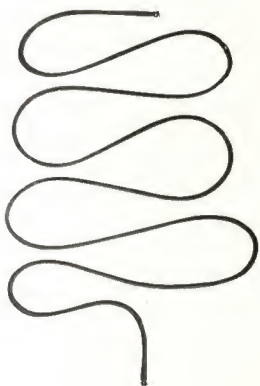

A most necessary tool. By driving same into the end of tubing it is expanded sufficiently for a distance of one-half inch, that another piece of tubing of the same size can be inserted and sweat in, thus allowing the lengthening of tubing neatly to any required length without the use of a collar.

“Good” Iron Pipe-joint Cement

For Water, Steam, Gas or Oil

F 516

The “Good” Cement

is the one cement which gives satisfaction under all conditions.

Economical—The same mixing can be used at various times, as cement remains in condition to use for some time.

Overcomes that uncertain “time loss” hunting for leaks, as it can always be depended upon to make tight.

“Sets” at once, allowing work to be tested immediately upon completion.

Joints can be readily disconnected where “Good” Pipe-joint Cement has been used.

Code	Per Pound
Cady In 15 pound cans	\$0.57

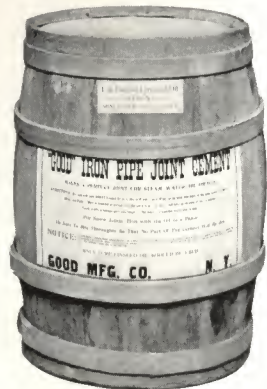

We make special prices in the following sized packages: Cans containing 25, 50, or 100 pounds; kegs containing about 235 pounds; and barrels containing 500 pounds.

Mixing Cans

We furnish mixing cans without charge with all the larger packages.

Of special advantage in large contract work.

"Good" Bath Fixtures

Special Manufacture for Plumbing Trade Requirements

Size 28 x 36 inches x 5 inches deep

F 518

Style No. X Cabinet — White Enamel Finish

Bath Fixtures are direct accessories to the plumbing business. They cannot be handled successfully, however, in a haphazard fashion, but must be given some attention the same as other parts of the business, and the proper line of fixtures must be secured.

The "Good" line has been specially developed to meet all legitimate competition in price, besides possessing the added advantage of a superior finish and most artistic designs.

We have made up cabinets and assortments containing the most salable articles, in various amounts to meet the requirements of the most modest to the largest and most complete establishments.

Full information and illustrations on the following pages. We have added new artistic designs in cast fixtures — have added wire fixtures — *reduced many prices.*

GOOD MANUFACTURING COMPANY, INC.

"Good" Oval Overhead Shower

Nickel-plated Brass Canvas Curtain

F 523

This is the only Overhead Shower made which conforms not only to the shape of the body, but also of the tub. The curtain does not extend over edge of tub, thus keeping the bathroom floor dry.

All metal parts have an extra heavy nickel-plated finish, making them easy to keep clean. Artistic in design and finish.

A particularly handsome and satisfactory shower in every way.

"Good" Swinging Soap Dish

(Patented)

Fits All Faucets

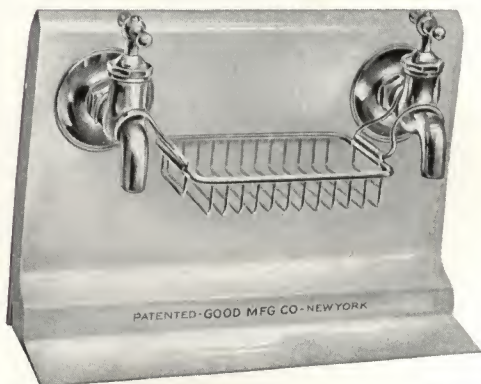

Made of drawn brass wire, in nickel-plated or polished brass finish.

F 572

Code		Per Dozen
Lawyer	No. 50, fits faucets 7 inches to 8½ inches, center to center . . .	\$12.00
Lax	No. 51, fits faucets 8½ inches to 11 inches, center to center . . .	12.00
Laxity	No. 52, fits faucets 11 inches to 14 inches, center to center . . .	13.70

Size of soap dish, 4¾ x 6 inches

Prices the same for either nickel-plated or polished brass finish

F 573

This display board showing sink back, including dummy faucets, is furnished free with orders of two dozen or more.

The display board less the faucets is furnished free with orders of one dozen.

This "Good" Swinging Soap Dish saves its cost in a very short time through its soap saving.

It is very convenient and practical, holding two cakes of soap and a brush and, while right at hand, yet is out of the way of the dishes.

Bath Soap Dishes—Nickel-plated Brass

F 574

Code		Per Dozen
Girt	No. 2, regular length	\$12.00
Gist	No. 2-x, extra length, for 5 inch roll rim tubs	14.40

Specially designed to take in two cakes of soap.

The bars are annealed, hence can be readily bent to fit the rim of any tub.

Dimensions of soap dish, $3\frac{3}{4} \times 5\frac{3}{8}$ inches.

Wall Sponge Holder—Nickel-plated Brass

F 575

Code		Per Dozen
Laxly	No. 1, Sponge holder, $6\frac{1}{4}$ inches in diameter, complete with screws	\$20.40

The back of sponge holder is solid, so that the water cannot drip outside of tub.

Combination Bath Soap Dish and Sponge Holder — Nickel-plated Brass

Code	Per Dozen
Abaca No. 2, regular length straps . .	\$27.60
Gird No. 2-x, extra length straps for 5 inch roll rim tubs	30.00

Size of soapdish, $3\frac{3}{4} \times 5\frac{3}{8}$ inches.

Diameter of sponge holder, $6\frac{1}{4}$ inches.

F 576

The size of the soap dish is such that it will accommodate two cakes of soap side by side, as illustrated.

The back of the sponge holder is solid, which prevents water from sponge from dripping outside the tub.

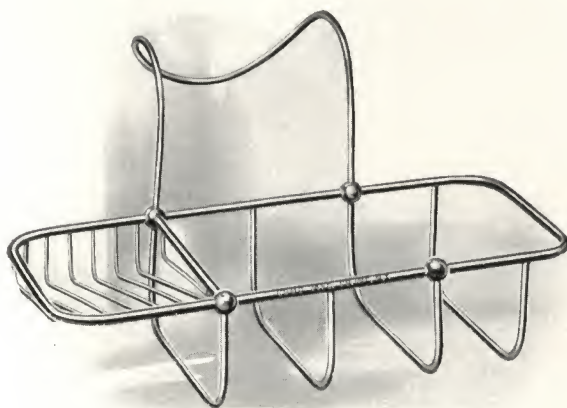

The bars are annealed, hence can readily be bent to fit the rim of any tub.

Bath Tub Seats

Adjustable to Any Width Tub

Style Nos. 1 and 2

Code

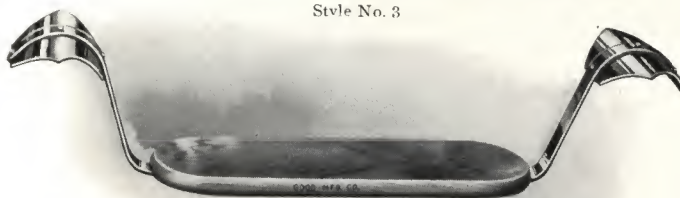

F 633

Per Dozen

Abear Style No. 1, extra fine finish and strength \$18.00
Impar Style No. 2, extra fine white enamel 21.00

The seat is highly finished solid oak, $5\frac{1}{2} \times 19\frac{1}{2}$ inches, brackets of heavily nickel-plated steel rod, the ends covered with rubber tubing to prevent injury to tub, and adjustable to any width. This is one of the most satisfactory seats made.

Style No. 3

Code

F 634

Per Dozen

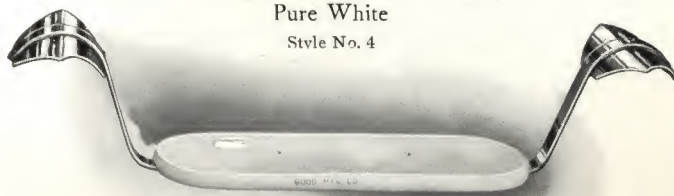

Abad Style No. 3 \$30.00

The seat is highly polished solid oak, $5\frac{1}{2} \times 17\frac{1}{2}$ inches, with heavily nickel-plated steel brackets and is adjustable to any width tub.

Ivory Bath Seat

Pure White

Style No. 4

Code

F 635

Per Dozen

Hock Style No. 4, size of seat, $17\frac{1}{4} \times 5\frac{7}{8}$ inches \$72.00

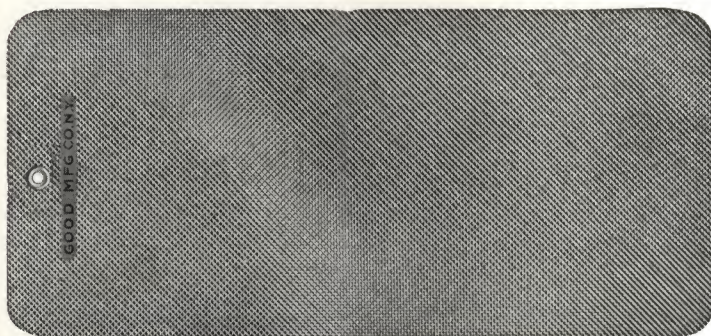

The beautiful ivory finish is *guaranteed* absolutely permanent, will never discolor with age, retaining its pure whiteness and original finish; will not flake or chip, never show hairlines, is non-absorbent and as easily cleaned as ivory.

The most beautiful, durable finish it is possible to make.
